
a
Span against R
full: $R = 128$
narrow: $R = 64$
50% of sources
99% of sources
n_{span}, mean $\hat{f}$
bins above the noise
f_0 [mHz]
b
Leakage, not span
narrow
full
relative error per source
$|f_0 T_{\text{obs}} - q|$ [bins]
c
Against $R = 16\,384$
narrow
full
$\propto R^{-1/2}$
median relative error
response points R
